Hiring Team
Tripadvisor

Dear Hiring Team,

I am excited to apply for the Software Engineer I position at Tripadvisor. With a Master's degree in Applied Modelling and Quantitative Methods and hands-on experience in full-stack development, I am confident in my ability to contribute effectively to your Trust & Safety Moderation and Fraud team.

My experience includes building scalable and secure web applications using React, TypeScript, Node.js, and PostgreSQL. I have worked on projects where I designed modular frontends and backend microservices, enabling seamless data flow and real-time responsiveness and developed the ability to analyze large datasets, optimize system performance, and design data-driven solutions

My personal projects showcase a Document Management System built with Express.js, JWT-based authentication, and PostgreSQL optimized with caching via Redis. This system handled over 100 concurrent document uploads and reduced database load by 40%. Additionally, I engineered a modular Content Summarizer app using React and TypeScript on the frontend and Node.js on the backend, integrating OpenAI API for AI-powered summarization. My technical expertise is complemented by experience working in Agile teams, conducting peer code reviews, and ensuring high-quality, maintainable code.

I am particularly drawn to Tripadvisor's commitment to building trust and brand integrity through innovative, high-performance solutions. I thrive in collaborative, fast-paced environments and look forward to contributing to a global engineering culture where continuous learning and ownership are valued.

I am legally authorized to work in Canada and eager to grow my career at a company that prioritizes innovation, accessibility, and customer success.

Thank you for considering my application. I look forward to the opportunity to further discuss how I can add value to your team.

Warm regards,
Kareem Alameen.
